

### **FastenMaster® Cortex® for Trim Guarantee of Performance**

FastenMaster fully guarantees the performance of the FastenMaster Cortex Concealed Fastening System for AZEK, Kleer or Versatex Trim for the following performance attributes for the life of your project:

**Plug connection:** When set correctly as described in the installation instructions, FastenMaster guarantees that the Cortex plugs will not raise above the trim surface.

**Plug UV stability:** The FastenMaster Cortex plugs for Trim have been tested for UV Stability. PVC Trim is very stable and not susceptible to color shift due UV exposure. FastenMaster guarantees that if there is any shift in color due to UV exposure, that shift will be matched by the surrounding Trim.

**Fastener corrosion:** The FastenMaster Cortex screw has been tested and is warranted for use in ACQ, Copper Azole pressure treated lumber. FastenMaster Cortex is approved for use in salt water areas. If the Cortex Trim is in direct contact with salt water (example: Dock application with Trim on the side which is touching water), FastenMaster Cortex is not approved.

**Fastener installation:** FastenMaster Cortex for Trim screws are guaranteed to install without cam out or spin out when installed using an 18 volt impact drill and installing into a structural member (wall stud, rafter tail, window frame, etc.)

**Fastener hold/connection:** FastenMaster Cortex for Trim screws are guaranteed to hold Trim in place without shearing or releasing when installed correctly (correct spacing as directed, hitting structural members)

**End splitting:** The FastenMaster Cortex for Trim screws are guaranteed not to cause splitting in ends of trim board when installed correctly. (Predrilled within 1/2" of end of board)

FastenMaster offers a full money back guarantee for the retail price of the product to anyone who is dissatisfied with the product. In addition, FastenMaster will replace all plugs and/or screws that are not performing correctly at no cost to the installer.
