Technical Evaluation Report
TER 1503-03
Use of FastenMaster® FrameFAST™ Structural Wood Screw Fasteners to Provide Uplift & Lateral Resistance to Wood Trusses, Rafters, or Floor Joists Attached to the Tops of Walls

OMG, Inc. DBA FastenMaster®

Product:
FastenMaster® FrameFAST™ Structural Wood Screw (FrameFAST™ Fasteners)

Issue Date:
May 17, 2016
Revision Date:
May 18, 2020
Subject to Renewal:
July 1, 2021
1 PRODUCT EVALUATED

1.1 FastenMaster® FrameFAST™ Structural Wood Screw (FrameFAST™ Fasteners)

2 APPLICABLE CODES AND STANDARDS

2.1 Codes

2.1.1 IBC—12, 15, 18: International Building Code®

2.1.2 IRC—12, 15, 18: International Residential Code®

2.1.3 FBC—14, 17: Florida Building Code (Product Approval Number FL 21662)

2.2 Standards and Referenced Documents

2.2.1 ANSI/AWC NDS: National Design Specification (NDS) for Wood Construction

2.2.2 ASTM A153: Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware

2.2.3 ASTM D1761: Standard Test Methods for Mechanical Fasteners in Wood

2.2.4 ASTM F1575: Standard Test Method for Determining Bending Yield Moment of Nails

2.2.5 ASTM F606: Standard Test Methods for Determining the Mechanical Properties of Externally and Internally Threaded Fasteners, Washers, Direct Tension Indicators, and Rivets
2.2.6 **AWC TR 12: General Dowel Equations for Calculating Lateral Connection Values**

3 **PERFORMANCE EVALUATION**

3.1 FrameFAST™ fasteners were evaluated, using assembly tests to derive allowable design values, as an alternate means of attaching metal plate connected wood trusses, rafters, or floor joists to the tops of walls for the purpose of providing uplift and lateral load resistance. The following conditions were evaluated:

3.1.1 Withdrawal strength of FrameFAST™ fasteners for use as an alternative to toenail connections, metal hurricane and seismic clips/straps, or nails in tension (uplift) loaded applications.

3.1.2 Shear strength of FrameFAST™ fasteners for use as an alternative to toenail connections, hurricane and seismic clips/straps, or nails in shear (lateral) loaded applications either parallel or perpendicular to wood grain.

3.1.3 Head pull through strength of FrameFAST™ fasteners for use as an alternative to toenail connections, hurricane and seismic clips/straps, or nails in tension (uplift) loaded applications.

3.2 Any code compliance issues not specifically addressed in this section are outside the scope of this TER.

3.3 Any engineering evaluation conducted for this TER was performed on the dates provided in this TER and within DrJ’s professional scope of work.

4 **PRODUCT DESCRIPTION AND MATERIALS**

4.1 The product evaluated in this TER is shown in Figure 1.

![FrameFAST™ Fastener Specification Diagram](image)

**FIGURE 1. FRAMEFAST™ FASTENER SPECIFICATION**

4.2 FrameFAST™ fasteners are manufactured with modified 10B21 carbon steel wire conforming to the manufacturers specifications and are coated with a proprietary finish.

4.3 FrameFAST™ fasteners are manufactured using a standard cold-formed process followed by a heat-treating process.

4.4 Fasteners are approved for use in fire-retardant-treated lumber, provided the conditions set forth by the fire-retardant-treated lumber manufacturer are met, including appropriate strength reductions.

4.5 FrameFAST™ fasteners are approved for use in interior and exterior conditions and in pressure-treated wood.

4.6 In-plant quality control procedures, under which the FrameFAST™ fasteners are manufactured, are audited through an inspection process performed by an approved agency.

4.7 The FrameFAST™ fasteners evaluated in this TER are designated in Table 1.
5 APPLICATIONS

5.1 Non-Structural Applications

5.1.1 FrameFAST™ fasteners are used to attach minimum 1½"-wide wood trusses, sawn lumber rafters, or floor joists to wood walls that meet the requirements of IBC Section 2308 or IRC Section R602 for wood structural framing members. The fasteners provide resistance to uplift or lateral loads applied parallel and/or perpendicular to the wall or structural framing member.

5.1.1.1 Walls shall consist, at a minimum, of a single or double top plate designed in accordance with IBC Section 2308.5.3.2 or IRC Section R602.3.2. More than two top plates is permitted.

5.1.1.2 See Table 2 for the design procedure and allowable design values for FrameFAST™ fasteners.

5.1.1.3 See Section 6 for installation requirements.

5.1.1.4 FrameFAST™ fasteners are used in buildings requiring design in accordance with IBC Section 1609 or wind analysis in accordance with IRC Section R301.2.1.

5.1.1.5 FrameFAST™ fasteners are used in buildings requiring design in accordance with IBC Section 1613 or seismic analysis in accordance with IRC Section R301.2.2.

5.2 Design Concepts and Allowable Design Loads

5.2.1 Allowable design loads for uplift and lateral resistance [parallel (F1) and perpendicular (F2) to the plane of the wall or structural member, Figure 2] are provided in Table 2 for FrameFAST™ fasteners. Allowable design loads are applicable to fasteners installed in accordance with the procedures described in Section 6.

5.2.1.1 Blocking requirements are shown in Figure 3 and Figure 4.

5.2.1.2 Example for calculating reduced uplift values based on embedment depth is shown in Figure 5.

5.2.1.3 Example top plate applications are shown in Figure 6, Figure 7, and Figure 8.

5.2.1.4 A header to truss application is shown in Figure 9.

SI: 1 in = 25.4 mm, 1 lb = 4.45 N
1. Wood truss, rafter, or floor joist members shall be a minimum of 2" nominal thickness. Design of truss, rafter, or floor joist members is by others.
2. Equivalent specific gravity of structural composite lumber (SCL) shall be equal to or greater than the specific gravities provided in this table. Refer to product information from SCL manufacturer.
3. For applications involving members with different specific gravities, use the allowable load corresponding to the lowest specific gravity.
4. No further duration of load increases permitted.
5. Use reduction factor of 0.80 when connecting each ply of multiply trusses to the top plate.
6. See Figure 3 and Figure 4 for blocking requirements between trusses, rafter, or floor joists.
7. For embedment depths into main member of less than 2½" (full penetration), reduced allowable uplift shall be calculated using Section 5.2.2 and Figure 5. For embedment depths greater than 2½", no further increases allowed.
5.2.1 In the F1 direction, design loads are given for assemblies with and without blocking between the roof or floor trusses. Blocking requirements are shown in Figure 3 and Figure 4.

![Figure 3. Truss Blocking Detail](image)

![Figure 4. Section View of Roof/Floor Joist Blocking](image)
5.2.2 For applications where the embedment depth into the main member is less than 2½" (full penetration), calculate the reduced allowable uplift per Figure 5.

5.2.2.1 The reduced thread embedment length does not include the tapered tip.

5.2.2.2 For embedment depths greater than 2½", no further increases are allowed.

---

**Calculating Reduced Uplift Values Based on Embedment Depth**

\[
\text{Reduced Uplift (lbs)} = \left( \frac{\text{Uplift from Table 2}}{\text{2.5" Max Thread Embed}} \right) \times \text{(Reduced Thread Embed)}
\]

**Example 1: FrameFAST Installed at 22.5° angle**

**Double Top Plate to Floor Truss**

- Double 2x6 SPF Top Plate
- Single 4x2 SPF Truss Bottom Chord
- Reduced thread embedment length = 1.63"

Calculation:

\[
\text{Reduced Uplift (lbs)} = \frac{595 \text{ lbs}}{2.5"} \times 1.63" = 387 \text{ lbs}
\]

**Example 2: FrameFAST Installed Vertically**

**Double Top Plate to Floor Truss**

- Double 2x6 SPF Top Plate
- Single 4x2 SPF Truss Bottom Chord
- Reduced thread embedment length = 1.5"

Calculation:

\[
\text{Reduced Uplift (lbs)} = \frac{595 \text{ lbs}}{2.5"} \times 1.5" = 357 \text{ lbs}
\]

---

5.2.1 Where it is anticipated that loads will be applied to a single fastener simultaneously in more than one direction, additional evaluation is required to account for the combined effect of these loads using accepted engineering practice.

5.2.1.1 Consult a professional engineer, as needed, for complex design conditions.

5.2.2 Where the application exceeds the limitations set forth herein, design shall be permitted in accordance with accepted engineering procedures, experience, and technical judgment.
6 INSTALLATION

**Figure 6. Installation of FrameFAST™ Fasteners on Wood Truss or Rafter to Triple Top Plate**

**Figure 7. Installation of FrameFAST™ Fasteners on Wood Truss or Rafter to Double Top Plate**
6.1 Installation shall comply with the manufacturer’s installation instructions and this TER. In the event of a conflict between the manufacturer’s installation instructions and this TER, the more restrictive shall govern.

6.2 Select a FrameFAST™ fastener with a length sufficient to fully embed 2½” of the fastener length into the truss or rafter. See Figure 6, Figure 7, and Figure 8 for guidance.

6.3 Install one (1) FrameFAST™ fastener upward through the wall top plates or wood structural framing member at the bottom corner of the top plates and into the center of the wood truss or rafter. The fastener shall be installed at a 20°-30° angle and shall penetrate the wood truss or rafter within ¼” of the centerline. See Figure 6, Figure 7, and Figure 8.

6.4 If the wood truss or rafter is located directly over a top plate splice, offset the fastener ¼” to one side of the splice and insert the fastener upward through the wall top plates or wood structural framing member at the bottom corner of the top plates and into the center of the truss or rafter. The fastener shall be installed at a 20°-30° angle.
6.5 Use a ½” low RPM/high torque drill to drive the fastener head flush with the surface of the wall framing or wood structural framing member.

7 TEST ENGINEERING SUBSTANTIATING DATA

7.1 FrameFAST™ fastener testing conduct by SBCRI, under contract with Qualtim, Inc., 2015 for the following conditions:

7.1.1 Uplift capacity of FrameFAST™ fasteners as evaluated for head pull through and withdrawal of fasteners
7.1.2 FrameFAST™ fastener performance when used as a truss hold-down
7.1.3 FrameFAST™ fastener performance when loaded laterally

7.2 Material property testing, conducted by the University of Montana – Wood Science Laboratory, 2016
7.3 Some information contained herein is the result of testing and/or data analysis by other sources which conform to IBC Section 1703 and relevant professional engineering law. DrJ relies on accurate data from these sources to perform engineering analysis. DrJ has reviewed and found the data provided by other professional sources to be credible.
7.4 Where appropriate, DrJ’s analysis is based on design values that have been codified into law through codes and standards (e.g., IBC, IRC, NDS®, and SDPWS). This includes review of code provisions and any related test data that aids in comparative analysis or provides support for equivalency to an intended end-use application. Where the accuracy of design values provided herein is reliant upon the published properties of commodity materials (e.g., lumber, steel, and concrete), DrJ relies upon the grade mark, stamp, and/or design values provided by raw material suppliers to be accurate and conforming to the mechanical properties defined in the relevant material standard.

8 FINDINGS

8.1 When used and installed in accordance with this TER and the manufacturer’s installation instructions, the product(s) listed in Section 1.1 can be used as an acceptable alternative to the following:

8.1.1 Toenail connections, metal hurricane and seismic clips/straps, or nails to resist the uplift and lateral loads due to wind and seismic conditions as provided for in Table 2
8.1.2 Provide resistance to uplift loads due to wind negative pressure applied from the truss above lifting up on the top plate of the wall, per Table 2
8.1.3 Provide resistance to lateral loads due to wind or seismic loads applied parallel or perpendicular to the wall, per Table 2

8.2 IBC Section 104.11 (IRC Section R104.11 and IFC Section 104.9 are similar) states:

104.11 Alternative materials, design and methods of construction and equipment. The provisions of this code are not intended to prevent the installation of any material or to prohibit any design or method of construction not specifically prescribed by this code, provided that any such alternative has been approved. An alternative material, design or method of construction shall be approved where the building official finds that the proposed design is satisfactory and complies with the intent of the provisions of this code, and that the material, method or work offered is, for the purpose intended, not less than the equivalent of that prescribed in this code…Where the alternative material, design or method of construction is not approved, the building official shall respond in writing, stating the reasons the alternative was not approved.

8.3 This product has been evaluated in the context of the codes listed in Section 2 and is compliant with all known state and local building codes. Where there are known variations in state or local codes applicable to this TER, they are listed here.

8.3.1 No known variations
9 CONDITIONS OF USE

9.1 For conditions not covered in this TER, connections shall be designed in accordance with accepted engineering practice.

9.2 Where required by the building official, also known as the authority having jurisdiction (AHJ) in which the project is to be constructed, this TER and the installation instructions shall be submitted at the time of permit application.

9.3 Any generally accepted engineering calculations needed to show compliance with this TER shall be submitted to the AHJ for review and approval.

9.4 Design loads shall be determined in accordance with the building code adopted by the jurisdiction in which the project is to be constructed and/or by the Building Designer (e.g., owner or registered design professional).

9.5 At a minimum, this product shall be installed per Section 6 of this TER and the manufacturer’s installation instructions.

9.6 Manufacturer’s installation instructions shall be shipped to the jobsite with the materials or otherwise be available on the jobsite for inspection.

9.7 This product is manufactured under a third-party quality control program in accordance with IBC Section 104.4 and 110.4 and IRC Section R104.4 and R109.2.

9.8 The actual design, suitability, and use of this TER, for any particular building, is the responsibility of the owner or the owner's authorized agent. Therefore, the TER shall be reviewed for code compliance by the building official for acceptance.

9.9 The use of this TER is dependent on the manufacturer’s in-plant QC, the ISO/IEC 17020 third-party quality assurance program and procedures, proper installation per the manufacturer’s instructions, the building official’s inspection, and any other code requirements that may apply to demonstrate and verify compliance with the applicable building code.

10 IDENTIFICATION

10.1 The product(s) listed in Section 1.1 are identified by a label on the board or packaging material bearing the manufacturer’s name, product name, TER number, and other information to confirm code compliance.

10.2 Additional technical information can be found at fastenmaster.com.

11 REVIEW SCHEDULE

11.1 This TER is subject to periodic review and revision. For the most recent version of this TER, visit drjcertification.org.

11.2 For information on the current status of this TER, contact DrJ Certification.
